- The BEST audio: one or two stereo, linear or compressed, main program audio channels, plus two aux audio channels
- Rock solid signal driven by a powerful 5 watt output and advanced LDPC error correction – up to a 10 dB signal improvement over other STLs
- The only native IP broadcast STL- up to 3.2 Mb/s throughput with three prioritized Ethernet and two RS-232 ports
- Built-in redundancy seamlessly switches between RF and internet connections
- Combine with IP Link to provide up to 20 stereo channels on a standard 950 MHz link – ideal for multistation backup sites
- User-adjustable QAM rates and channel bandwidths to optimize signal to noise, fade margin and data capacity
- Simple-to-use front panel control, coupled with a rich Web GUI and SNMP, make setup and monitoring a snap
